

KISHAN PRASAD

| Edmonton, AB | (587)-566-8141 | kkprasad@ualberta.ca | [linkedin.com/in/kkprasad1/](https://www.linkedin.com/in/kkprasad1/) | github.com/kprasad001/

PROFESSIONAL SUMMARY

Full-stack software engineering co-op student at the University of Alberta with hands-on experience building and shipping AI-native features using the OpenAI API, Claude, and Codex across production systems. Proficient in TypeScript, Python, React, and Node.js, with a track record of architecting reliable full-stack systems serving real users at scale. Built an EEG-based ML motion classifier using OpenBCI, demonstrating applied machine learning beyond LLM integration. Comfortable across the entire stack: REST API design, microservice backends, containerized deployments, and mobile frontends. Excited to build AI-first products that meaningfully change how people work.

EDUCATION

University of Alberta

Expected Apr. 2027

B.Sc. Computing Science, Specialization in Software Practice — Minor in Economics

- **Relevant Courses:** Data Structures & Algorithms, Databases, Operating Systems, Object-Oriented Programming, Software Design, Computer Security, Quantitative Modeling & Forecasting.

SKILLS

Programming/Database Languages: Python, Java, JavaScript, TypeScript, SQL, C, C++, Bash, HTML/CS, PostgreSQL, MySQL, MongoDB, SQLite.

Frameworks & Tools: React, React Native, Node.js, FastAPI, Django, Flask, Docker, AWS, Firebase, Git/GitHub, REST APIs, Arduino, Linux.

Methodologies: Agile/Scrum, TDD, CI/CD, UML, Sequence Diagrams, SDLC, OOP, Microservices, Version Control.

EXPERIENCE

Alberta Bionix - Student Led Engineering Club

Edmonton, AB

Software Lead & Full-stack developer

Sept. 2025 – Present

- Led a team of 4 through full SDLC, system design, code reviews, automated testing, and deployment using Agile workflows and Git-based version control.
- Built a real-time signal acquisition and visualization system in Python and C/C++ with hardware integration, validated across 50+ participants; owned the system end-to-end from requirements through deployment.
- Communicated technical roadmap directly to non-technical stakeholders, securing \$2,000 in external sponsorship through cross-functional collaboration across engineering and operations.

Help Young Minds Initiative - Student Led Tutoring Club

Edmonton, AB

Executive & Webmaster

Apr. 2025 – Apr. 2026

- Designed and maintained a full-stack internal web platform using JavaScript, Node.js, and HTML/CSS, increasing user engagement by 75% and reducing administrative overhead by 20%.
- Built automated scheduling and volunteer coordination tools to streamline operations for the team.

PROJECTS

EDSS Navigator App

Jan. 2026 – Apr. 2026

Python, FastAPI, TypeScript, React Native (Expo), AWS (Lightsail), Docker, REST API, Agile

- Architected a full-stack production system serving 1,500+ active users: designed REST API contracts for a FastAPI microservice backend, containerized with Docker on AWS, consumed by a TypeScript/React Native mobile frontend.
- Integrated OpenAI API to power in-app features, translating LLM capabilities into concrete user-facing functionality with a focus on reliability and observability.
- Wrote 400+ automated unit tests following TDD practices; managed CI/CD pipelines to automate build, test, and deployment cycles.

Neuromotion

Nov. 2025

Python, JavaScript, HTML/CSS, Machine Learning, AI,

- Designed and trained an ML classifier to predict motion intent from EEG signals captured via OpenBCI hardware, applying feature extraction and model evaluation on real biosignal data.
- Prototyped an end-to-end pipeline from raw hardware input to model inference output, demonstrating applied ML beyond LLM-based tooling.

Nutriplate

May 2026

Python, JavaScript, Django, React, AI, PostgreSQL, REST APIs

- Built an AI-powered full-stack nutrition platform using Python, Django, React, and PostgreSQL, featuring an AI recipe generator that creates personalized meal suggestions from a user's virtual cart.
